Description :

Prsentation de l'diteurOver the past fifty years, many thousands of conflict simulations have been published that bring the dynamics of past and possible future wars to life. In this new work, Philip Sabin explores the theory and practice of conflict simulation as a topic in its own right, based on his thirty years of experience in designing wargames and using them in teaching. Simulating War sets conflict simulation in its proper context alongside such techniques as game theory and operational analysis. It explains in detail the analytical and modelling techniques involved, and it teaches you how to design your own simulations of conflicts of your choice. The book provides eight simple illustrative simulations of specific historical conflicts, complete

with rules, maps and counters. *Simulating War* is essential reading for all recreational or professional simulation gamers, and for anyone who is interested in modelling war, from teachers and students to military officers. *Revue de presse* Brilliant. Professor Sabin has produced a masterwork, one worthy to grace bookshelves that are home to Von Reisswitz's *Kriegsspiel*, Wells's *Little Wars*, Morse and Kimball's *Methods of Operations Research* and Schelling's *The Strategy of Conflict*. If you want to learn more about the unquestionably horrible but quintessentially human activity that is war, you need to read this book. --Dr Peter Perla, Senior Research Analyst at the Center for Naval Analyses, Alexandria VA, USA and author of *'The Art of Wargaming'* In *Simulating War* Professor Sabin provides us with a scholarly and very useable toolkit that allows us to supplement the dry data of statistical analysis or computer simulation with the realities of human interaction and the play of Clausewitz's chance. Wargaming is a neglected and misunderstood art in the modern military: this book does much to put that right, and should be on the shelf of any thinking military professional. --Brigadier Andrew Sharpe OBE, Head of Research in the Development, Concepts and Doctrine Centre, UK Defence Academy Presentation de l'auteur Over the past fifty years, many thousands of conflict simulations have been published that bring the dynamics of past and possible future wars to life.
